Gimbal Brief Introduction

FH310-TIR MINI high-precision 3-axis gimbal is developed based on FOC technology, features high stability, small volume and low power consumption. The gimbal offers 2 smart speed modes: FAST speed and LOW speed. Fast speed mode is used for small zooming range, low speed mode is used for large zooming range. Also the gimbal supports one-key back to center. The gimbal supports PWM,S.BUS control and serial command control.

Target Tracking Function

FH310-TIR MINI also has the target tracking function, with which you will never lose the object. Just zoom in and put the object you want to track in the screen, move the cursor to the object and lock it via controller, and then the camera will track it automatically.
